

Extraordinary NIH Opportunities for FY 2013

- Investing in Basic Research
- Accelerating Discovery Through Technology
- Advancing Translational Sciences
- Encouraging New Investigators and New Ideas

“To help this country compete for new jobs and businesses, we also need to invest in basic research and technology, so the great ideas of the future will be born in our labs and in classrooms like these.”

*President Obama
Signing of America Invents Act
Thomas Jefferson High School
September 16, 2011*

MicroRNAs

An Exciting New Frontier

- What are microRNAs (miRNAs)?
 - Tiny snippets of RNA that control levels of protein production
- Hot areas of miRNA research
 - Design treatments for cancer, cardiovascular disease, immune disorders, Parkinson's disease, many other conditions
 - Explore how viruses, environmental factors affect human gene expression
 - Produce stem cells from adult skin cells

MicroRNAs

New Clues to Schizophrenia

- Schizophrenia
 - Affects 1% of U.S. population
 - Total economic burden > \$62 billion annually
 - Family history is a risk factor
 - Exact genetic, environmental factors unknown
- Genome-Wide Association Study
 - > 9,000 people with schizophrenia, > 12,000 unaffected
 - Discovered 5 genetic variants associated with schizophrenia
 - Includes **microRNA 137**, known to play role in brain development

Investing in Basic Research

“... the hope of major advances lies in sustaining broad and free-ranging inquiry into all aspects of the phenomena of life, limited only by the criteria of excellence, the scientific importance, and the seriousness and competence of the investigator.”

– *James A. Shannon, M.D.*
8th Director of NIH

135 NIH grantees/trainees have become Nobel Laureates

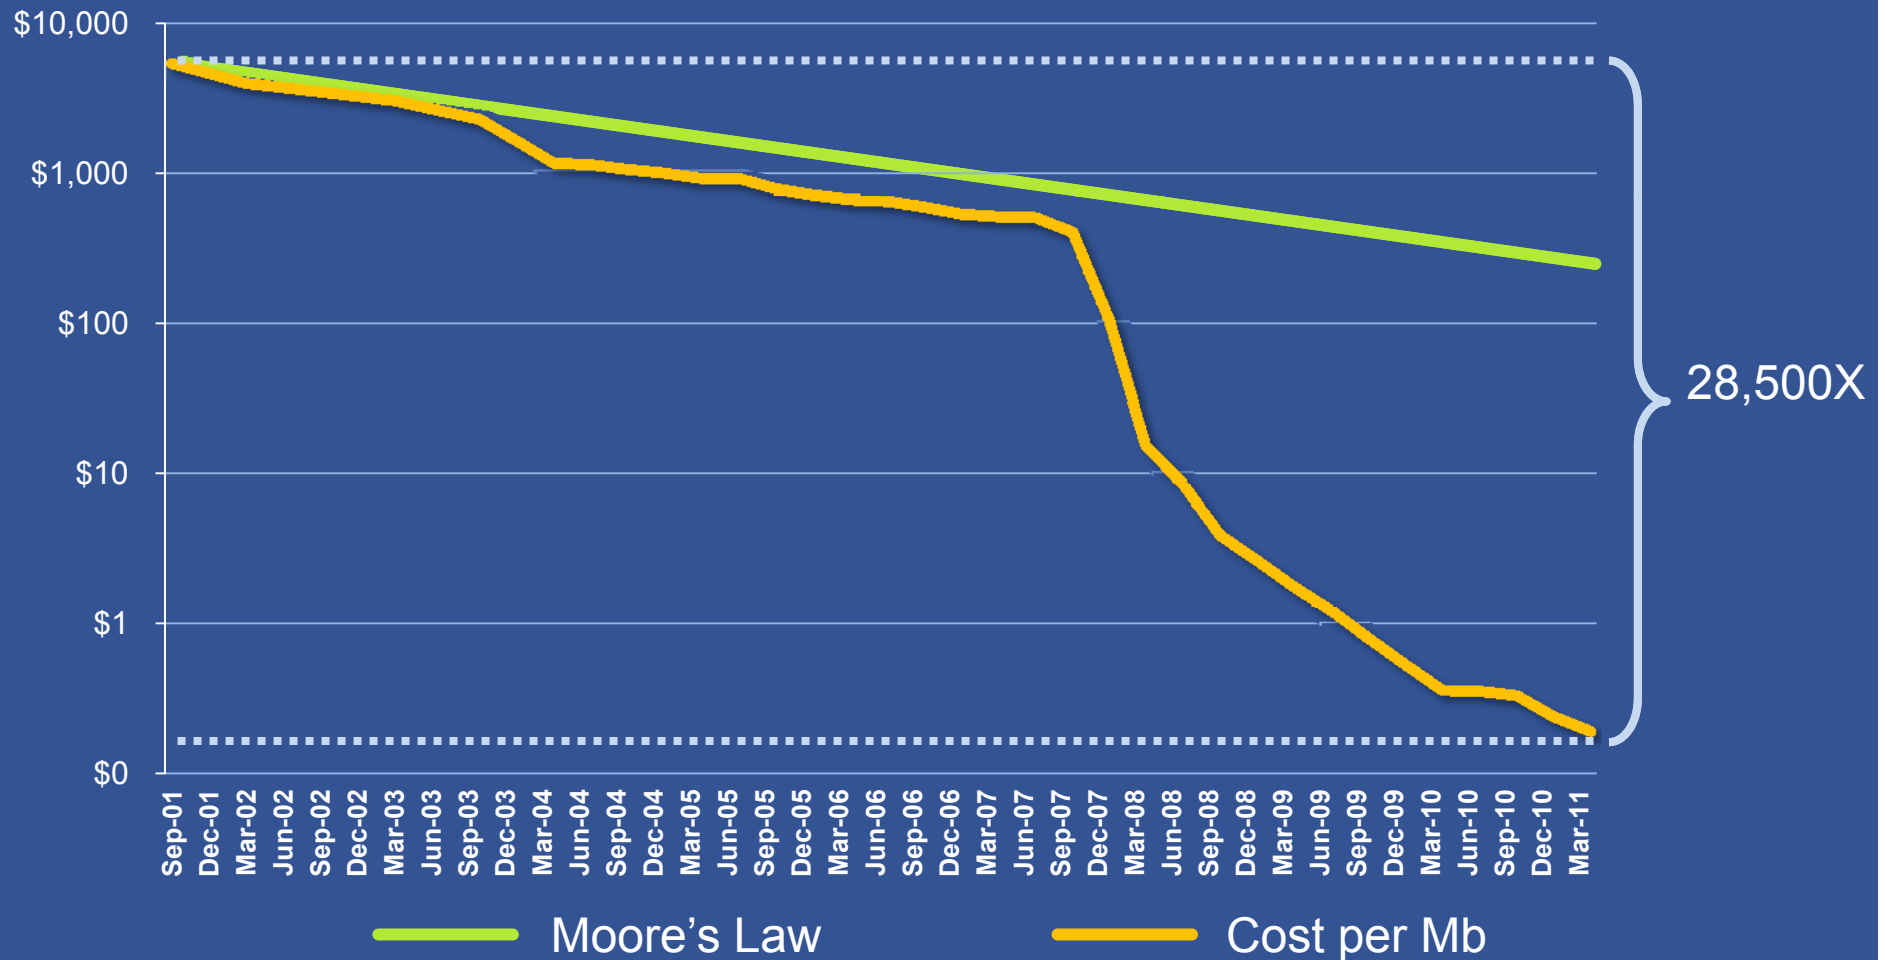

Extraordinary Opportunities for FY 2013

- Investing in Basic Research
- Accelerating Discovery Through Technology
- Advancing Translational Sciences
- Encouraging New Investigators and New Ideas

Sequencing Costs Drop Faster than Moore's Law

Cost per Megabase of DNA Sequence

Applications of Genomic Analysis

Identification of a New Disease

- Kentucky family suffers from:
 - Progressive, debilitating joint pain
 - Calcium build-up in arteries of hands and feet; not heart
- Sisters, Louise and Paula, seek answers at NIH Undiagnosed Diseases Program
- Sequencing finds genetic mutation that causes new disease, Arterial Calcification Due to CD73-deficiency (ACDC)

Extraordinary Opportunities for FY 2013

- Encouraging New Investigators and New Ideas

Creation of the National Center for Advancing Translational Sciences (NCATS)

POLICY

www.ScienceTranslationalMedicine.org 6 July 2011 Vol 3 Issue 90 90

Reengineering Translational Science: The Time Is Right

Francis S. Collins

Despite dramatic advances in the molecular pathogenesis of disease, translation of basic biomedical research into safe and effective clinical applications remains a slow, expensive, and failure-prone endeavor. To pursue opportunities for disruptive translational innovation, the U.S. National Institutes of Health (NIH) intends to establish a new entity, the National Center for Advancing Translational Sciences (NCATS). The mission of NCATS is to catalyze the generation of innovative methods and technologies that will enhance the development, testing, and implementation of diagnostics and therapeutics across a wide range of diseases and conditions. The new center's activities will complement, and not compete with, translational research being carried out at NIH and elsewhere in the public and private sectors.

The Need for a Universal Flu Vaccine

Influenza Virus

Target for
universal
flu vaccine

- Up to **50,000** U.S. deaths associated with flu annually
- **\$87 billion** in economic costs
- Protection currently involves getting a flu shot **every year**
- Vaccine manufacture takes **6 months**; requires predicting this year's flu strain before production

Universal Flu Vaccine: **Development Timeline**

- 2007 → Basic and preclinical studies
- 2011 → Phase 1 human clinical trials
- 2013 → Phase 2 human clinical trials
- 2014 → Complementary human studies in partnership with private sector
- 2015 → Licensure studies and application for licensure

Advancing Translational Sciences

Mark O. Hatfield Clinical Research Center

Lasker~Bloomberg Public Service Award

For serving since its inception as a model research hospital — providing innovative therapy and high-quality patient care, treating rare and severe diseases, and producing outstanding physician-scientists whose collective work has set a standard of excellence in biomedical research.

Extraordinary Opportunities for FY 2013

- Investing in Basic Research
- Accelerating Discovery Through Technology
- Advancing Translational Sciences
- Encouraging New Investigators and New Ideas

Opportunities for Tomorrow

NIH Investing in New, Transformative Ideas

- NIH-Lasker Clinical Research Scholars
- Transformative R01
- NIH Director's Pioneer Award
- New Innovator Award
- NIH Director's Early Independence Awards

Building the Research Workforce

Need for Greater Diversity: NIH's Action Plan

Enhancing Recruitment

- Evaluate current training programs
- Phase out unsuccessful programs, expand successful ones

Enhancing Career Advancement

- Increase number of early career reviewers, including those from underrepresented populations
- Examine grant review process for bias, develop interventions
- Improve support for grant applicants
- Gather expert advice on additional action steps

ACD Working Group on Diversity in the Biomedical Research Workforce

- Charged by Advisory Committee to the Director (ACD) to focus on 5 key transition points in the pipeline:
 1. Entry into graduate degree programs
 2. Transition from graduate degree to post-doctoral fellowship
 3. Appointment from post-doctoral position to first independent scientific position
 4. Award of first independent research grant from NIH or equivalent in industry
 5. Award of tenure in an academic position or equivalent in an industrial setting
- Produce interim recommendations by December 2011 and final recommendations by June 2012

ACD Working Group on the Future Biomedical Research Workforce

- Charged with developing model for sustainable and diverse U.S. biomedical research workforce that can inform decisions about training optimal number of people for appropriate types of positions that will advance science and promote health
- Questions to be considered
 - What is the right size of the workforce?
 - What are the appropriate types of positions to support?
 - What is the best way to support these positions?
 - What types of training should be provided?
- Timetable
 - August 17 – October 7, 2011: RFI seeking stakeholder input
 - Summer 2012: Final report anticipated

ACD Working Group on the Future Biomedical Research Workforce

- **Sally Rockey, Ph.D.**, co-chair

Challenges to Biomedical Research

Appropriation History vs. Actual Purchasing Power

FY 1998 appropriation – FY 2012 Presidential Budget (\$ in billions)

Grant Success Rates FY 1978-2012

Possible Strategies for Dealing with Budget Challenges

- Make the case for NIH
- Trim spending across the board
- Evaluate, rearrange research portfolio
- Change ways of managing NIH resources

Your suggestions?

For more information, go to:

http://report.nih.gov/budget_and_spending/index.aspx

The screenshot shows the NIH RePORT website interface. At the top, it displays the U.S. Department of Health & Human Services logo and the URL www.hhs.gov. Below this is the NIH logo and the text 'NATIONAL INSTITUTES OF HEALTH Research Portfolio Online Reporting Tools (RePORT) REPORTS, DATA AND ANALYSES OF NIH RESEARCH ACTIVITIES'. A search bar with a 'GO' button and a 'Site Map' link are also visible. A navigation menu includes links for HOME, FREQUENTLY REQUESTED REPORTS, REPORT CATALOG, CATEGORICAL SPENDING, RePORTER, GLOSSARY, FAQs, LINKS, and ABOUT RePORT. The main content area features a 'NEWS UPDATES' section with a 'NEW' tag, dated Friday, October 7, 2011, mentioning the release of RePORTER ver. 3.0.3. The central focus is the 'Budget and Spending' section, which includes a dollar sign icon and a 'NEW' tag next to the link 'Ways of Managing NIH Resources'.
